General Description of Varieties of the WORLD'S BEST PRIZE-WINNING DAHLIAS

We specialize in dahlias that have a record of WINNING PRIZES; that are known to be vigorous, and have been thoroughly tested out in many sections of the United States.

Nearly every one of our dahlias has received a Certificate of Merit from the Trial Grounds at Storrs, Conn., East Lansing, Mich., Cincinnati, Ohio, or Fairmont, W. Va. That means a rating of at least 85 per cent.

Healthy Dahlias

It is our policy—and we strictly adhere to it—that NO dahlia will grow in our gardens that shows ANY disease whatsoever. If a dahlia cost us a nice sum of money, it matters not if it is NOT healthy, it is dug up and burned at once. We never purchase any stock from a dahlia raiser if we know he allows diseased dahlias to grow in his gardens.

*"We grow a number of the very best
And let, who will, raise all the rest."*

Dahlia Plants

Each year our own plantings consist of over fifty per cent plants. We have found that if plants are started and grown properly, they will produce as good, if not better, results than roots.

We take particular care to select the very best stock to grow the plants from. As soon as the "cutting" is well rooted, it is transferred to pots or wood bands; then at the proper time they are moved from the greenhouse into the cold frames for the "hardening" process. In ten days they are ready for shipping.

We have adopted the MODERN METHOD of shipping plants; that is, instead of sending the plants in the pots or wood bands, we take them out and very carefully wash all the dirt off the roots and very carefully pack them in moist peat and spagmun moss. We have found this method excellent; and of the many dozens we mailed out last year, only one plant had to be replaced. We guarantee EVERY plant to reach our customer in good condition.

Dahlia Seed

Every dahlia grower who grows "seedlings" will tell you his greatest thrill is "watching" the "new" dahlia coming in bloom. Every new dahlia will be different from any other known variety.

Dahlia seed planted in the spring will commence to bloom in August, and continue until frost. It is not unusual to have blooms 10 to 12 inches across.

New seedlings of merit, that have few faults, are readily salable at worthwhile prices.

The dahlia seed we offer is the same high quality that we plant and from which we obtain our outstanding introductions. This seed is grown in the finest location in the United States, where the seasons are the longest, and that is in the extreme Southwest.

There are NO small varieties grown within a radius of several miles. Only the very LARGEST varieties.

If you find that you have a good seedling, please write us about it.

Fifty Dahlia Seed, \$2.75; 100 Dahlia Seed, \$5.00.

A Great Curiosity is the Sacred Lily of India

(Amorphophallus Rivieri)

This is a great novelty flower and is curious, interesting and unique.

Planted in the garden when you plant your dahlias, it produces an attractive plant that suggests a small palm—a single stem that is mottled green and white with purple and reddish shadings.

There are three palm-like branches bearing numerous small, lacy leaves. When the top is killed by frost, dig the bulb and store as you do your dahlias.

When this bulb becomes four or five years old, it will throw up a large stalk, in February or March, bearing at the top a very large Calla-shaped bloom, wine colored, ten to fourteen inches across, with a spadix that may be eighteen inches to two feet long. When this bulb blooms (it has a rather unpleasant odor) it requires no soil or moisture.

After the bulb once blooms, it continues to do so each year thereafter. Every bulb produces from two to five bulblets each year, besides growing to its normal size.

We never had any kind of a flower that attracted so much attention. Very few people ever saw anything like it.

Dahlia Culture

TIME. The proper time to plant dahlias for exhibition purposes in this latitude is about the first of June. Of course, if one is not depending upon the shows, they can be planted as soon as the frost is over. In this climate we advise a succession of planting from May 10th to July 1st.

PREPARING SOIL. About one week or ten days before planting, spade your garden ten inches deep and leave it in the rough, then broadcast into soil to every 100 square feet or to approximately ten dahlia hills five pounds raw bonemeal mixed with two pounds of sulphate potash which should be raked into the soil thoroughly.

PLANTING. For exhibition flowers, dahlias should be planted at least three feet apart each way, that is, the large varieties, and two feet each way for the small kinds. Dig the holes at least six inches deep. Place the tuber horizontally in the bottom of the hole with the bud an inch or so from the stake. Cover the roots with about two inches of soil. As the plants grow the hole may be filled in by cultivating.

PLANTING OF GREEN PLANTS. Set out plants in late afternoon or on a cloudy day, removing pot from plant. Make sure that plant is planted deep enough and if the following day should be hot and sunny, suggest shading plant with a peach basket during the heat of the day. Fill hole gradually with dirt as plant grows.

STAKING. Five to six-foot stakes will be required to support tall growing varieties. The stakes should be set in at the time of planting. If you wait until later to drive in the stakes, much damage may be done to the roots of the plants.

EXHIBITION BLOOMS. To get large blooms you should disbud your plants. Leave only one stalk growing out of the ground. Let three sets of leaves appear and then pinch out the center or crown of the plant. Branches will appear at the base of each leaf. On these branches there will be three buds. Pinch out the two side buds, allowing the center one to develop. New branches will appear in the form of laterals between the leaves and stalk. Pinch out all these laterals below the remaining bud except the two nearest the main stalk. When your blooms are cut, these two laterals will develop into the next set of blooms.

DIGGING. After the first heavy frost, the tops of the plants will blacken and dry. A few days to a week after a frost the tops should be cut off and the clumps dug up. They should be carefully dried off in the sun for a few hours before being stored.

STORAGE. Store the tubers in boxes or barrels in a cool place. The best storage temperature is about 45 degrees Fahrenheit. The storage atmosphere should be moist enough to prevent excess drying of the roots and at the same time not so moist as to encourage mold or storage rots. If you have a very choice clump, wrap it in wax paper, such as comes around bread. You will find this will keep your roots almost perfect. It is just as good as dipping in paraffine.
